

# TCM Unify FOR CORPORATIONS

IMAGE SCAN

TCM Unify consolidates and manages transaction content captured and/or processed on disparate internal and external systems thus enabling organizations to eliminate information silos, reduce the cost of transaction content management, fully leverage all of their previous technology investments even as they add new ones, and deliver more complete actionable business intelligence to decision-makers and customers.

## How TCM Unify works

TCM Unify provides an intelligent integration layer that gathers transaction images and data from disparate platforms, systems, hardware, and/or third-party processing service providers into a single feature-rich content management environment.

Once imported, those file datasets are reformatted enabling the creation of critical business information. Any user can view the “complete picture” through easy to use configurable tools like dashboards and scorecards or quick snapshots of historical trends. After the completion of any value added optional workflows TCM Unify can provide output in standard file formats for re-use by any organization and/or its customers, suppliers, and business partners.

### Applicable Uses

- Financial Management, Working Capital and Liquidity Reporting
- Single Point of Integration for all transactional content
- Stranded Payments and Documents

### Why use TCM Unify?

Corporations can benefit from the unification of data and the critical business information it creates. Identifying opportunities to improve working capital and liquidity on a daily basis can be achieved using TCM Unify with the acquisition of all receivables information from any financial institution or type or payments made. Research, adjustments, inquiries or customer service also benefit

from the attachment of contextual information; no more digging through packages or mounds of paper trying to match open invoices to payment values. Payment unification is only as good as the associated addenda information, TCM Unify through its robust transactional hierarchy makes all scanned documents and/or field content unified as well. Unifying receivables is great, but add in other critical business information from across the organization like, Risk Management, Legal Departments, Customer Acquisition Documents or other important documents or files and the power of TCM Unify will enable your organization to reach higher levels of productivity and better decision making with real time actionable business intelligence.

### Major Benefits

- Increase working capital and liquidity
- Fully leverage previously purchased software and hardware
- Enter new geographic markets more cost-effectively
- Manage financial partners more effectively
- Improve overall performance, transparency and compliance
- Transform stagnant data into actionable business intelligence
- Quickly integrate new business resulting from M&A activity
