FOR RELEASE - SEPTEMBER 10, 2009

ImageScan's TCM Unify™ Integrates Transaction Images and Data from Disparate Systems and Sources

The Unification of Transactional Content Cuts Costs, Improves Governance, and Provides Superior Business Intelligence

Lanham, Md—September 10, 2009 – ImageScan Inc., a leading developer of payment and transaction processing software, today announced the release of TCM Unify, a transactional content management system that consolidates and manages transaction images and data captured and/or processed on disparate internal and external systems.

By aggregating and normalizing transactional content from all types of systems and sources, TCM Unify enables customers to:

- eliminate information silos
- reduce the total cost of transaction content management
- fully leverage all previous technology investments even as they add new ones
- deliver complete actionable business intelligence to decision-makers and customers
- avoid expensive, high-risk integration projects

Organizations experiencing geographic expansion, rapidly changing internal or external costs, acquisitions and other normal disruptive changes are seeking a means to rapidly integrate new sources of transactional business content. Rather than deploying rip and replace systems, TCM Unify layers across a broad spectrum of applications joining their content in a seamless expeditious fashion. Having successfully integrated with partners such as EMC²®, Hyland Software® and eGistics®, and unifying source data from processing systems like those deployed from Wausau® and Metavante®, multiple Fortune 500 companies and a leading commercial bank, have already experienced the benefits that interoperability brings from TCM Unify.

Once customers have aggregated their transactional content, they can use ImageScan's flexible, easy-to-use tools—which include configurable rules-based workflow and routing, load balancing, intelligent character recognition, transaction balancing, float assignment, exceptions management, and other value-added capabilities—to get maximum business value from that content. TCM Unify also provides output in standard file formats so that content can be re-used across the organization, as well as by customers, suppliers, and business partners.

"To improve bottom-line business performance, organizations of all kinds need to cut transaction processing costs, while at the same time gaining greater visibility into receivables-related activity and trends," said Andrew Lindseth, President and CEO of ImageScan. "ImageScan's TCM Unify uniquely delivers these operational advantages by providing both aggregation of content and fully configurable management of that content."

About ImageScan

ImageScan delivers advanced payment processing and transactional content solutions, meeting the evolving needs of financial institutions, health care providers, outsourcers, corporations, and government agencies. ImageScan solutions continue to concentrate on the processing and management of complex transactional content in a user friendly configurable environment that can be deployed in a non-disruptive, cost-effective manner. Organizations enjoy the benefits of a reduced cost structure, superior business intelligence, optimized business processes, increased accuracy and the ability to offer differentiated services to their market place via ImageScan's industry specific solutions and services.
